### TROUBLE SHOOTING

To ensure prompt service, all inquiries regarding the Cable TV service should be directed to the office.

- Many things can cause poor reception.
  - If you are experiencing reception issues please check the following items before calling for service.
1. Bad or damaged cables, (RG-6 cable should be used not RG-59) connectors, (Twist on connectors and push on connectors are not advised) bad or wrong splitters or splices. (We sell Connector/Cable at office (Using no or not larger than one 2-way splitter is best).
  2. Excessive long coiled up cables.
  3. DVD or another component is on.
  4. Amplifiers; Cable will not work well running thru an on-board / built in amplifier.
  5. A/B switch may be in "OFF AIR" mode rather than "Cable".
  6. Flat screen TVs need to be in Cable mode and auto programmed.
  7. To access the HD Channels, you must have at least a Mpeg 2 tuner in your TV. If you do not, please view channels in Analog.
